

ATIF GHANI

DevOps Engineer | Cloud Engineer

+92 300 8615014 | atifsohailghani24@gmail.com | Sialkot, Pakistan

SUMMARY

DevOps Engineer with a proven track record in AWS infrastructure automation, secure architecture design, and scalable microservices deployment. Highly skilled in Terraform and cloud best practices, with strong communication and a collaborative working style.

EXPERIENCE

DevOps Engineer

May 2024 - Dec 2025

Skyloop Cloud, Istanbul, Turkey

Designed and operated secure AWS cloud architectures using VPCs, public/private subnets, NAT Gateways, security groups, and NACLs to support production workloads on ECS, EKS, and EC2.

Built and managed end-to-end AWS infrastructure using Terraform, creating reusable modules for VPC, EKS, ECS, RDS, Lambda, IAM, S3, CloudFront, and Application Load Balancers.

Implemented CI/CD pipelines using GitHub Actions and Jenkins to build, test, and deploy containerized applications, including automated Docker image builds and pushes to Amazon ECR with rolling deployments.

Deployed and operated Amazon EKS and ECS (EC2 & Fargate) clusters, configuring autoscaling, ingress controllers, service discovery, and ALB integrations to run microservices across multiple environments.

Provisioned and maintained Amazon RDS (PostgreSQL & MySQL) with secure networking, backups, parameter tuning, and application integrations with EKS, ECS, and Lambda.

Developed serverless and event-driven systems using AWS Lambda, API Gateway, S3 events, DynamoDB Streams, CloudWatch Events, and IoT Core to power automation workflows and backend APIs.

Designed and implemented AWS IoT solutions, including IoT Core, Greengrass v2, and IoT FleetWise, enabling secure MQTT communication, edge processing, and telemetry pipelines for connected devices and robotics workloads.

Intern

EARTech Information Technology

Focused on cybersecurity and DevOps, mastering Azure DevOps, Git, and GitHub.

Gained valuable experience in project management and career planning while successfully deploying real-world projects.

MLOPS PROJECT

MLOps Zero to Hero — Applied Project

2026

Designed and implemented end-to-end MLOps workflows (training, versioning, deployment, serving, scaling) using Docker, Kubernetes, and KServe for cloud-native model inference.

Built and compared custom model-serving (Flask + Gunicorn/WSGI) against managed KServe deployments, evaluating trade-offs in scalability, operability, and maintenance.

Implemented AWS SageMaker end-to-end ML workflows, including IAM role-based access separation for Data Scientists, ML Engineers, and MLOps Engineers, and real-time inference endpoints.

Designed high-availability, auto-scaling inference architectures using EC2 Auto Scaling Groups, Application Load Balancers, and automated EC2 user-data bootstrapping.

Applied production ML design principles — stateless inference, reproducible environments, and CI-driven automation — across VM, Kubernetes, and managed cloud platforms.

Orchestrated ML training pipelines on Kubernetes using Kubeflow.

Versioned datasets and models with DVC for reproducible experiments.

Tracked experiments and managed model lifecycle with MLflow.

EDUCATION

Bachelor of Science in Computer Engineering

August 2024

Bahcesehir University, Besiktas

High School Diploma

June 2019

The City School

CERTIFICATIONS

AWS Certified Developer - Associate

Kubernetes on AWS EKS: Hands-on Get Started for Dev and DevOps

Azure DevOps Fundamentals for Beginners

EARTech Information Technology Certificate of Completion

MLOps Zero to Hero — Udemy

SKILLS

AWS • Terraform • Kubernetes (EKS) • Docker • ECS (EC2 & Fargate) • CI/CD (GitHub Actions, Jenkins) • RDS (PostgreSQL, MySQL) • Lambda & Serverless • IoT (Core, Greengrass, FleetWise) • Microservices Architecture • Infrastructure Automation • Azure DevOps • Kubeflow • DVC • MLflow • SageMaker AI • Python • Java • C++ • Spring Boot • Security Best Practices

LANGUAGES: English • Urdu (Native)
